**Abstract**: In this article, the Fergana region during the years of Soviet ruleon the history of the oil refinery based on scientific literature and official reports.

**Keywords:** Industry, raw materials, enterprise, processing, population, petroleum products, production.

Fergana has large enterprises that play a key role not only in the region but also in the country's economy. In particular, the potential of industrial enterprises such as the Fergana Oil Refinery and the Fergana Nitrogen Production Association is of great importance.

In particular, the Fergana Oil Refinery has its own position and potential not only as an independent Uzbekistan, but also as the largest industrial enterprise in Central Asia. has undergone sustainable, sustainable development based on advanced advanced technologies.

The natural climatic conditions of the Fergana Valley, rich mineral resources, labor potential were the basis for the development of the oil refining industry in Uzbekistan [1].

Since the second half of the 19th century, the oil refining industry has been developing in Central Asia. After the Russian Empire invaded the country, it focused heavily on industry in the interests of the metropolis. During this period, imperial investors made sectoral investments that they considered profitable. In particular, Fedorov, Khludov, Zakho, Gromov were interested in the oil industry in the Fergana Valley. However, they have not been able to effectively implement practical activities in this regard.

During the years of Soviet rule, special attention was paid to this area. The government, in its own interests, has begun construction of the Fergana Oil Refinery. Also, an oil refining network has been established in Fergana. All factors are taken into account in the same construction. In particular, the regional proximity to the source of raw materials, consumer regions is taken into account. As a result, the Fergana Oil Refinery was built. Construction of the plant began in 1949.

The first workshop was established in 1957 at the Fergana oil refinery. VVVerba was appointed head of this shop. He managed the sex facilities, in particular, receiving raw materials and providing them for processing. Experienced specialists from Kuybishev and Ufa made a significant contribution to the success of the workshop.

In 1957, the number of specialists with higher education at the plant was 4. At the same time, women worked at the Fergana oil refinery. In 1956, for example, a total of 34 women were employed. In 1957, the number of women was 106. Three of them were Uzbek women.

Fergana Oil RefineryIt began its operations on January 27, 1959 for the first time. Hamda,In 1959, he released his first product.

For the uninterrupted operation of the Fergana refinery, raw materials were supplied from oil-rich regions of Central Asia based on demand.

On July 17, 1959, the State Commission adopted the first act of the plant. The Fergana refinery produced gasoline, kerosene, diesel fuel, commercial oil and other petroleum products.

During the years of Soviet rule, there were changes in the management system of the network. In particular, the Fergana refinery was merged in 1976 with Fergana Oil and Gas Company. Also, on May 5, 1976, the Fergana Oil Refinery was attached to the Oltiariq Oil Refinery. In 1992, the association was renamed Uzneftniqaytaishlash.

In 1979-1980, according to the decision of the State Attestation Commission, financing plans for 1972-1986 were established. From 1981 to 1987, plans for the production of oil products and their value were established. The following statistics on wages at the factory can be cited. In particular, the main operator is paid 600 rubles, the chief driver 500 rubles, locksmiths 400 rubles, and other workers 400 rubles a month.

Later, various equipment and devices were put into operation at the plant for years to deepen oil refining and refining of oil products, as well as to produce auxiliary components.

Especially in the years of independenceThe material and technical base of the Fergana Oil Refinery has been improved and the production of competitive products has been launched. In accordance with the Resolution of the Cabinet of Ministers of the Republic of Uzbekistan dated November 12, 1996 No 397 "On the reconstruction of the Fergana refinery" extensive reconstruction work was carried out. As a result, it was equipped with new devices. The quality of oil products has improved and their range has increased [1].

In recent years, repairs have been carried out. In particular, the Fergana refinery was completely renovated in 2000. In addition, 44 new production facilities were installed. It has also been transformed into a refinery with a capacity of 8.5 million tons of oil per year.

"Fergana oil refining» The plant's products, including oils used for non-freezing lubrication even in extreme cold, are exported to various parts of the country. From 2019 The Fergana Oil Refinery has reached a new stage in the import of raw materials and increase production. In particular, Resolution of the Cabinet of Ministers of the Republic of Uzbekistan dated February 7, 2020 «On modernization and reconstruction of the Fergana oil refinery» The decision was made by the Fergana Oil Refinery «Jizzax Petroleum» The transfer to the trust management of the LLC is a clear example of this [6].

Today, the plant is reconstructing existing production facilities and introducing new construction works, as well as modern digital technologies.

"Fergana oil refining» the plant is one of the leading enterprises in the region for the production of fuels and lubricants with a very rich history and tradition. Currently, the plant employs about 7,000 people.

Thanks to the current focus on the development of the oil and gas sector, the country is an important step towards ensuring energy independence, as well as the well-being of the economy and our citizens.
